Coordination Center

Evening Summary

Date/Time Stamp: **Monday, September 07, 2015 - 9:42 PM**

Weather Summary

...Significant Warming Trend This Week...

...The big story this week will be high pressure building across the Great Basin leading to a significant warming/drying trend. Temperatures will quickly return to normal levels early this week...then becoming 5 to 10 degrees above normal by the latter half of the week, with the warmest conditions across the western half of Nevada.

Winds at the surface becoming primarily light and slope driven, while gradient winds aloft mainly NW with diminishing speeds through the week.

Under this strengthening high pressure ridge, mid and upper slopes will begin to see increasingly poor RH recoveries as thermal belts become better organized.

Preparedness Levels

Current:

Great Basin	3
National	4

Great Basin Fire Activity: 13 fires for 152 acres (#s from FAMWEB SIT Report)

Large Fire Growth: 0 acres

Notes of Significance																	

Resources:

- Competition for resources has decreased and initial attack resources have become more readily available.

Great Basin Fire Potential Summary

Fire danger has decreased significantly across the northern part of the Great Basin where widespread rain along with areas of snow have fallen. However, further south and west, precipitation has not been as widespread and fuels are much drier.

With a warming, drying trend forecast to begin in earnest midweek, fuels will steadily dry out, with areas that stayed precipitation free over the past week being the first to approach critical levels.
